

## **STICS project research assistant job description**

Temporary part-time (12-15 hours/week for 6 months with some flexibility)

Start date: June 17

### **Job description**

The STICS project is funded by AGE-WELL, involving a team of researchers from across Ontario, and is led out of the Toronto Rehab Institute at UHN. Our project team is looking at technologies which track the location of residents within long-term care facilities. We are interested in using these technologies to improve quality of care and quality of life for residents of long-term care.

An important component of this project is developing an understanding the perspectives of long-term care residents, families, staff, and administrators, particularly about how to balance the potential benefits of these technologies with their risks. We are seeking a student research assistant to assist in the collection and analysis of some preliminary stakeholder consultation data, and in the preparation of a literature review

### **What you will do:**

- Attend 4 stakeholder meetings organized by the study team over 4 months: take detailed notes, prepare summaries of these meetings and synthesize this information into a report under the supervision of study team members.
- With guidance of study team members and an information specialist, develop a literature review protocol and search strategy, review and summarize relevant research, and synthesize these results into a review paper

### **Qualifications:**

- A masters or doctoral level student in a relevant field
- Experience with literature reviews
- Excellent written and oral communication and interpersonal skills
- Experience with qualitative data analysis
- Experience using NVivo an asset

Interested applicants should send resume and cover letter to Dr. Andrea Iaboni – [andrea.iaboni@uhn.ca](mailto:andrea.iaboni@uhn.ca)
